**PLEASE NOTE:** Our pubs are the only pubs worldwide that meet all safety standards, we have written and designed the insurance policy for public liability insurance in Ireland and the UK. Our pubs have been designed by engineers so have incorporated several unique features that meet all health and safety requirements, example lower deflate rates, stronger internal structure design etc. as we have a rental company and have been renting units for the past 3 years we have used our experience and unique designs ideas to all pubs to make life easier for you setting up and maintaining. Don't take the chance of purchasing badly made units that are not water resistant and have poor and badly made designs and quality, just research some of the units available on the rental market at the moment and you will understand, compare to our units and will quickly notice the difference.
